

One saved decision. No repeated action.

Implemented prototype | September 13, 2026 | No model calls in the public fixture

VERIFIED FIXTURE PATH

Solid: fixture flow. Dashed: one separate guarded model evaluation; not a reliability-rate claim.

WHAT THE NUMBERS MEAN

4 unique events / 2 quiet decisions / 2 escalation decisions / 1 quiet duplicate

These are fixture policy decisions, not delivered notifications, verified wins, or measured time saved.

TRUST BOUNDARY

Trusted event labels and IDs. No live inbox or sender verification. Guarded output is application-generated JSON.

One shared store is thread-safe. Separate processes, reused IDs with changed content and expiry need more work.
