

One saved decision. No repeated action.

Implemented prototype | September 13, 2026 | No model calls in the public fixture

VERIFIED FIXTURE PATH

SEPARATE STRANDS INTEGRATION

Solid: fixture flow. Dashed: separate real-model partial proof; complete sequence not accepted.

WHAT THE NUMBERS MEAN

4 unique events / 2 quiet decisions / 2 escalation decisions / 1 quiet duplicate

These are fixture policy decisions, not delivered notifications, verified wins, or measured time saved.

TRUST BOUNDARY

Event labels and IDs are trusted inputs. No live inbox, sender verification, or final-model-output enforcement.

One shared store is thread-safe. Separate processes, reused IDs with changed content and expiry need more work.
